

Professional Summary

Software Engineer with 4+ years at Microsoft Azure building distributed identity systems at Fortune 1 scale. Led crisis response for outages affecting 2M+ users, shipped a production LLM agent integrated with live scheduling infrastructure, and eliminated \$10M+ in enterprise security risk. Targeting roles at the intersection of resilient backend systems and applied AI.

Core Skills

Backend & Distributed Systems: Java, C#, Python, Kotlin, REST APIs, Microservices, Docker, Kubernetes, CI/CD, Azure DevOps

Cloud & Identity: Azure Hybrid Identity, High-Availability Services, BCDR, SDL

AI/LLM: LLM Integration, Agentic Workflows, MCP (Model Context Protocol), Prompt Engineering, OpenRouter, Claude code, Cursor

Security & Compliance: GDPR, Threat Modeling, Secure System Design, Penetration Testing Remediation, Zero Trust

Data: KQL, SQL, MongoDB, Elasticsearch, Redis, Neo4j

Frontend (Secondary): TypeScript, Svelte, NodeJS, React

Experience

Microsoft, Redmond, Washington

June 2021-September 2025

Software Engineer

Team: Azure Hybrid Identity

- **Restored mission-critical provisioning pipeline** for a Fortune 1 retailer (1.5M+ employees) within 24 hours by architecting a fault-tolerant recovery path with proactive KQL-based tenant health monitoring; surfaced previously undetectable failure modes and prevented recurrence.
- **Led incident response** for a global outage fully blocking provisioning for an entire geographic region (2M+ users); contained impact within 1 hour via targeted feature flag disablement, diagnosed root cause in distributed provisioning flows, and shipped a production fix within 24 hours, unblocking 2 downstream dependent client services.
- **Drove global integration** of a distributed identity provisioning service into an ML-based security enforcement platform across 8 regions; validated full feature parity, maintained service availability throughout rollout, and extended attack-vector protection to 2M+ enterprise users.
- **Owned BCDR and threat modeling remediation** following major service integration; resolved coverage gaps and brought documentation in line with expanded platform capabilities.
- **Re-architected logging** across service to achieve GDPR compliance without sacrificing diagnostic fidelity for on-call and security investigations; the privacy-preserving telemetry pattern was adopted as the team standard.
- **Designed and deployed** a production Microsoft Copilot LLM agent to automate on-call shift substitution workflows; configured policy-aware guidelines and team-defined thresholds via agent instruction, integrated live scheduling data through MCP, and connected to Microsoft Teams for team-wide accessibility. Reduced per-cycle active coordination from 3+ hours to about 1 hour.
- **Resolved a multi-year provisioning failure** causing chronic success-rate degradation across Fortune 500 enterprise tenants; traced root cause to a validation change silently rejecting a legitimate customer object flow, shipped a targeted fix restoring provisioning reliability, and added persistent observability improvements.

Blackboard, Indianapolis, Indiana

June 2020-August 2020

Full-Stack Software Engineer Intern

- **Improved performance and accessibility** of Blackboard Ultra UI serving 5M+ students during peak COVID remote-learning demand by optimizing frontend state management and rendering behavior.

Selected Projects

- **Agentic SDLC - AI Scheduling Assistant** February 2026
Stack | Python, FastAPI, SQLAlchemy, React 18, TypeScript, TailwindCSS, Ollama, OpenRouter, Docker, nginx
 - **Designed and executed** an end-to-end agentic development workflow: converted a product concept into structured OpenSpec documentation, decomposed requirements into parallel sprint tracks, and orchestrated multiple AI coding agents as a virtual dev team. Delivered a production-quality scheduling assistant with local LLM inference (Llama 3/Mistral via Ollama), Google Calendar integration, and full Docker/nginx orchestration targeting Raspberry Pi 4 constraints.

Education

Bachelor of Science, Major in Computer Science, Minor in Economics

May 2021

Rose-Hulman Institute of Technology, Terre Haute, IN
